SUMMARY

Backend Developer with experience building distributed systems, AI agentic pipelines, and real-time platforms. Proficient in Python, FastAPI, Django, and PostgreSQL, with practical exposure to event-driven architecture (Redis Streams, Celery), LLM tooling (LangChain, Gemini), and cloud infrastructure (AWS, Docker).

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, HTML, CSS, C++, Go

Backend & Frameworks: FastAPI, Django, Django REST Framework, Flask, Celery, Redis Streams

AI & ML: LangChain, LangSmith, Scikit-learn, XGBoost, Pydantic

Databases: PostgreSQL, SQLite, Redis

Real-Time: WebSockets, WebRTC, Django Channels, ASGI

Cloud & DevOps: AWS (Basics), Docker, Git, GitHub

Testing & Observability: Pytest, Postman, Swagger/OpenAPI, LangSmith, JWT, OAuth

EXPERIENCE

Backend Developer Intern

Jun 2024 – Sep 2024

Elixir Techne · Ahmedabad, Gujarat

- Shipped 15+ RESTful API endpoints using Django REST Framework covering auth, data processing, and CRUD workflows, reducing manual admin operations by ~40%.
- Optimized PostgreSQL schemas and queries, eliminating N+1 patterns and improving index utilization to reduce average response times.
- Integrated JWT auth, conducted code reviews, maintained Git branching discipline, and authored full Postman API documentation.

PROJECTS

Distributed Order Engine | Python · FastAPI · Celery · Redis Streams · PostgreSQL · LangChain · React

2026

- Built an autonomous AI agentic pipeline using Google Gemini 2.5 Flash + LangChain to triage, resolve, and audit supply chain exceptions in real-time, eliminating manual support tickets entirely.
- Engineered a fail-safe ACID sandbox with SQLAlchemy — any tool failure or LLM hallucination triggers automatic session.rollback(), routing orders to EXCEPTIONAL_HOLD with zero data corruption.
- Processed thousands of concurrent order webhooks via Redis Streams + Celery workers, keeping FastAPI ingest latency under 50ms regardless of queue depth.
- Shipped an immutable AgentAuditLog table + LangSmith telemetry capturing 100% of prompts, tool calls, and tokens; all financial math computed server-side via Python's Decimal module.

Connect | Django · Django Channels · WebSockets · WebRTC · React · PostgreSQL · JWT

2025

- Built a real-time messaging and P2P video/audio platform using WebSockets for sub-100ms signaling and WebRTC for direct media streaming, eliminating server-side relay overhead.
- Scaled concurrency with Django Channels + Daphne ASGI, handling thousands of simultaneous WebSocket connections; secured all routes with JWT and modeled friend graphs in PostgreSQL.
- Shipped a glassmorphism React UI with Framer Motion animations and full Swagger/OpenAPI documentation.

Telecom Customer Churn Prediction | Python · Django · Scikit-learn · XGBoost · Pandas · SMOTE

2025

- Trained an XGBoost classifier using SMOTE oversampling and exposed predictions via REST API supporting individual and bulk CSV inference, serialized with Joblib for low-latency serving.
- Built a Django analytics dashboard dynamically rendering confusion matrices and ROC curves, giving business users direct model performance visibility without code.

Banking Management System | Django · Django REST Framework · SQLite

2025

- Developed RESTful banking APIs (deposits, withdrawals, transfers) with full data validation and a tamper-evident JSON-based transaction passbook per account.
- Implemented CSV/Excel bulk import and configured the Django Admin Panel, reducing manual data entry overhead for back-office operations.

EDUCATION

Bachelor of Technology — Computer Science & IT

May 2026

Ganpat University · Ahmedabad, Gujarat

Sal Institute of Diploma Studies · Ahmedabad, Gujarat
